The innovation for your production - simple and universal!

speedMATE measures the speeds of moving tracks and piece goods in order to monitor, control and regulate production systems.

The big advantage: The measurement is non-contact, purely optical, without mechanical components and therefore slip-free. In applications and mechanical processes in which measuring wheels cannot be used due to sensitive materials, for example, the non-contact speedMATE with its high measuring accuracy is the ideal sensor.

The speedMATE can also perform a trigger function, i.e. emit a start pulse, e.g. for labelling devices, as soon as a previously defined increment value is reached. The speedMATE is suitable for almost all materials and surfaces - even for reflective and smooth glass surfaces.
