Level

Vibrating level switch Compact version Models TLS-CC, TLS-CM

WIKA data sheet LM 30.12

For further approvals, see page 6

Applications

- General purpose vibrating level switch designed to suit all liquids
- Particularly suitable as overflow and dry run protection of pumps, vessels and pipelines
- Suitable for industrial applications

Special features

- Compact design
- Low maintenance costs
- Stable and reliable level detection, unaffected by flow, bubble formation, vibrations, build-up or solids in the medium

Vibrating level switch, model TLS

Description

The core element of the vibrating level switch is the vibrating fork with integrated vibration drive. When the vibrating tuning fork is immersed in the medium, the resonance frequency of the tuning fork decreases. The frequency change is detected by the electronic circuit and is converted to a switching signal. Irrespective of the mounting position, level changes can be detected very accurately.

The respective switch point can be changed via a pipe extension. The TLS-C vibrating level switch is specially designed for industrial applications and offers reliable point level detection. It is ideal for monitoring bilges and leaks as well as for point level detection in oil tanks of rotor gearboxes. The vibrating level switches are, depending on the version, suitable for an operating temperature of $-40 \dots +150$ °C [-40 \ldots +302 °F] and an operating pressure of -1 \ldots +64 bar [-14 \ldots +928 psi]. The vibrating level switch is suitable for media with a density of 500 \ldots 2,500 g/cm³ [289 \ldots 1,445 oz/in³]. The viscosity of the media should be between 0.1 and 10,000 cP [0.24 and 21,190 lb/ft·h].

Application example

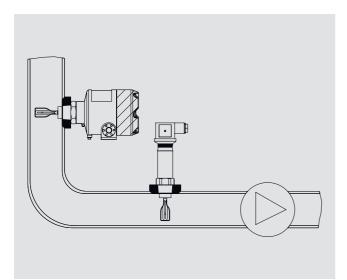

In practice, the vibrating level switches are mainly used in two areas: Firstly, the level switches are used to detect and control high and low levels in liquid vessels. Secondly, the vibrating level switches are used to detect liquids in pipelines to prevent the pump from running dry.

Level detection for vessels

The vibrating level switch is usually installed on the side of the tank to detect the upper and lower liquid levels. If the vessel has no side openings, the limit level switch can also be mounted on the tank from above. A pipe extension is then often used to achieve the desired switch point. Installation on the underside of the tank is also possible.

Pipeline monitoring

To ensure that a pump does not run dry, there must be sufficient liquid in the intake pipe. The vibrating level switch can detect this and thereby prevent damage to the pump. Since the tuning fork only protrudes 38 mm [1.5 in] into the pipeline, it can be used to measure in small diameter pipelines.

Overview of versions

Model	Description
TLS-CC	Vibrating level switch, compact version with angular connector DIN 175301
TLS-CM	Vibrating level switch, compact version with circular connector M12 x 1

Vibrating level switch TLS-CC Compact version with angular connector DIN 175301

	Mounting thread	Mounting thread with extension	Clamp connection	Clamp connection with extension
 Connector Direction mark Switch point Insertion length Extension 				
Electrical connection	 4-pin per DIN EN 175301-803 M16 x 1.5 			
Process connection	■ G ³ ⁄4" 2" ■ ³ ⁄4" 2" NPT		1" 4" per ASME BPE	
Material				
Connection housing	Stainless steel 316L			
Wetted parts	 Stainless steel 1.4404 (316L) Stainless steel 1.4404, 14435 (316L), electropolished Hastelloy C-276 Hastelloy C-276, electropolished 			
Ambient temperature	-40 +60 °C [-40 +140	°F]		
Supply voltage	DC 24 V			
Process temperature	-40 +100 °C [-40 +212 °F]	-40 +150 °C [-40 +302 °F]	-40 +100 °C [-40 +212 °F]	-40 +150 °C [-40 +302 °F]
Density of the medium	\geq 500 2,500 kg/m ³			
Operating pressure	-1 +64 bar [-14.5 +928	8.3 psi]		
Switching output	 SPST relay output PNP transistor output 			
Power consumption	< 1 W			
Max. switching power (relay output)	DC 30 V / 3 A			
IP ingress protection	IP65			
Insertion length	64 mm [2.52 in]	64 3,000 mm [2.52 118.11 in]	 60 mm [2.36 in] 43 mm [1.69 in] 47 mm [1.85 in] 	60 3,000 mm [2.36 118.11 in]
Switch point	Switch point = insertion length - 13 mm [0.51 in]			
Tuning fork length	42 mm [1.65 in]38 mm [1.50 in]			

Vibrating level switch TLS-CM Compact version with circular connector M12 x 1

	Mounting thread	Mounting thread with extension	Clamp connection	Clamp connection with extension

Wiring scheme

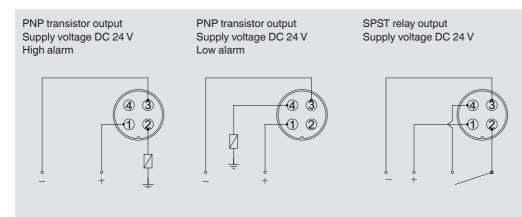

→ For details on the wiring scheme, see the model TLS installation and operating instructions, article number 14639448

TLS-CC

4-pin coupler connector per DIN EN 175301-803, with electrical connection M16 x 1.5

TLS-CM Circular connector M12 x 1, 4-pin

Approvals

Logo	Description	Region	
CE	EU declaration of conformity	European Union	
	EMC directive EN 61326 emission (group 1, class B) and immunity (industrial environments)		
	RoHS directive		
UK CA	UKCA	United Kingdom	
	Electromagnetic compatibility regulations		
	Restriction of hazardous substances (RoHS) regulations		

Certificates (option)

Certificates	
Certificates	 2.2 test report per EN 10204 (e.g. state-of-the-art manufacturing, material proof) 3.1 inspection certificate per EN 10204 (e.g. material proof for wetted metal parts)
